Use EMPLOYEES table for the following:

1. Arrange all the employees using hire_date and display the first_name, the last_name and the salary
   SELECT first_name,last_name, salary
   FROM employees
   ORDER BY hire_date;

2. Display the minimum salary for employees having department_id=60 or 50.
   SELECT MIN(salary)
   FROM employees
   WHERE department_id in (60, 50);

3. Display all the information about the employees having salary between 8000and 10000 and department_id=90.
   SELECT *
   FROM employees
   WHERE department_id=90 and Salary BETWEEN 8000 and 10000;

4. Display the first_name and the last_name in a single column for employees having manager_id=124 and department_id=50.
   SELECT first_name || ' ' || last_name
   FROM employees
   WHERE manager_id=124 and department_id=50;

5. Display the first in the alphabetic list of names name for employees having department_id = 50(use the last_name column to arrange).
   SELECT first_name, last_name
   FROM employees
   WHERE department_id=50
   ORDER BY last_name;

6. Display the first hired employee having department_id = 50.
   SELECT MIN(hire_date)
   FROM employees
   WHERE department_id = 50;

7. Increase the salary of employees having department_id=50 by 200 euros and display the salary, the last_name, the first_name and the new salary.
   SELECT salary, last_name, first_name, salary+200
   FROM employees
   WHERE department_id = 50;

8. Display the average salary for employees where department_id = 90, 50 or 80 and round to two decimal places.
   SELECT ROUND(AVG(salary),2)
   FROM employees
   WHERE department_id IN (90, 50, 80);

9. Arrange in descending order all the employees having manager_id =124 using salary, and display first_name, last_name, hire_date and the salary.
   SELECT first_name, last_name, hire_date, salary
   FROM employees
   WHERE manager_id = 124
   ORDER BY salary DESC;

10. Arrange in descending order according to last_name and display first_name, last_name, salary and hire_date for employees having department_id=80 and salary >9000.
    SELECT first_name, last_name, hire_date, salary
    FROM employees
    WHERE department_id=80 and salary >9000
    ORDER BY last_name DESC;

11. Increase the salary by 5% and display the first_name, the last_name, the salary, and the new salary.
    SELECT first_name, last_name, salary, salary+salary*0,05
    FROM employees;

12. Using a substitution variable for department_id, display the maximum salary for each department.
    SELECT MAX(salary)
    FROM employees
    WHERE department_id = :enter_dept_id;

13. Using a substitution variable for job_id, display the average of the salaries for each job_id.
    SELECT AVG(salary)
    FROM employees
    WHERE job_id = :enter_job_id;

14. Using a substitution variable, display the first_name, the last_name, and the department_id for employees having manager_id=124 or 149.
    SELECT first_name, last_name, department_id
    FROM employees
    WHERE manager_id = :enter_mana_id;

15. Using a substitution variable for job_id, display the first_name, the last_name, the department_id, and the job_id for employees having job_id=sa_rep or sa_man.
    SELECT first_name, last_name, department_id, job_id
    FROM employees
    WHERE job_id = :enter_job_id;

16. Using a substitution variable for manager_id, display the first_name, the last_name, the department_id, the hire_date and the salary for employees having manager_id=124 or 149 and hired before 01.05.1999.
    SELECT first_name, last_name, department_id, hire_date, salary
    FROM employees
    WHERE manager_id IN manager_id = :enter_mana_id AND hire_date < ('01-05-1999');

17. Arrange all the employee's using salary and display first_name, last_name and the salary.
    SELECT first_name, last_name, salary
    FROM employees
    ORDER BY salary;

18. Display the average salary for employees where job_id = st_clerk and round to two decimal places.
    SELECT ROUND(AVG(salary), 2)
    FROM employees
    WHERE job_id = 'ST_CLERK';

19. Display the latest hire date for department_id=90.

```
SELECT MAX(hire_date)
FROM employees
WHERE department_id = 90;
```

20. Display the last in the alphabetic list of names name for department_id=50.

```
SELECT first_name, last_name
FROM employees
WHERE department_id = 50
ORDER BY last_name DESC;
```

21. Display the last_name, first_name and the salary for employees havind the salary greater than the average of salaries for employees having department_id=50, 80 or 90.

```
SELECT last_name, first_name, salary
FROM employees
WHERE salary > (SELECT AVG(salary) FROM employees WHERE department_id
IN (50, 80, 90));
```

22. Display the first_name, the last_name, and the salary for employees hired before Rajs.

```
SELECT first_name, last_name, salary
FROM employees
WHERE hire_date < (SELECT hire_date FROM employees WHERE last_name =
'Rajs');
```

23. Display the first_name, the last_name, and the salary for employees who earn less than the average salaries for all the employees having department_id=50 or 80.

```
SELECT first_name, last_name, salary
FROM employees
WHERE salary < (SELECT AVG(salary) FROM employees WHERE department_id
IN (50, 80));
```

24. Display first_name, last_name, and the salary from employees who earn more than the minimum salaries for employees hired after Higgins.

```
SELECT first_name, last_name, salary
FROM employees
WHERE salary > (SELECT MIN(salary) FROM employees WHERE hire_date >
(SELECT hire_date FROM employees WHERE last_name = 'Higgins'));
```

25. Display the first_name, the last_name, and the salary for employees hired before Higgins.
SELECT first_name, last_name, salary
FROM employees
WHERE hire_date < (SELECT hire_date FROM employees WHERE last_name = 'Higgins'));

26. Display the first_name, the last_name, and the salary for employees who earn less than Gietz.
SELECT first_name, last_name, salary
FROM employees
WHERE salary < (SELECT salary FROM employees WHERE last_name = 'Gietz');

27. Display the first_name, the last_name, and the salary fror employees having the same manager as Rajs and the same department_id as Matos.
SELECT first_name, last_name, salary
FROM employees
WHERE manager_id = (SELECT manager_id FROM employees WHERE last_name = 'Rajs ') AND department_id = (SELECT department_id FROM employees WHERE last_name = 'Matos');

28. Display the first_name, the last_name, and the salary for employees having the same job_id as Matos.
SELECT first_name, last_name, salary
FROM employees
WHERE job_id = (SELECT job_id FROM employees WHERE last_name = 'Matos');

29. Display the first_name, the last_name, and the salary for employees who earn more than the average salaries for all the employees having manager_id=124 or 149.
SELECT first_name, last_name, salary
FROM employees
WHERE salary > (SELECT AVG(salary) FROM employees WHERE manager_id IN (124, 149));

30. Display the first_name, the last_name, and the salary from employees having the same department as Taylor.
SELECT first_name, last_name, salary
FROM employees
WHERE department_id = (SELECT department_id FROM employees WHERE last_name = 'Taylor');

31. Display the last_name, the salary and the department_id from employees with a salary of less than the average of salaries from employees having department_id=50 or 80.
SELECT last_name, salary, department_id
FROM employees
WHERE salary < (SELECT AVG(salary) FROM employees WHERE department_id IN (50, 80));

32. Display all the information about employees who are in the same department as Taylor.
SELECT *
FROM employees
WHERE department_id = (SELECT department_id FROM employees WHERE last_name = 'Taylor');

33. Display the first_name, the last_name, and the salary from employees who are in the same department as Zlotkey.
SELECT first_name, last_name, salary
FROM employees
WHERE department_id = (SELECT department_id FROM employees WHERE last_name = 'Zlotkey');

34. Display all those employees who earn more than Lorentz and are in the same department as Zlotkey.
SELECT *
FROM employees
WHERE salary > (SELECT salary FROM employees WHERE last_name = 'Lorentz')
AND department_id = (SELECT department_id FROM employees WHERE last_name = 'Zlotkey');

35. Display all those employees who have the same job id as Rajs and were hired before Zlotkey.

```
SELECT *
FROM employees
WHERE job_id = (SELECT job_id FROM employees WHERE last_name = 'Rajs')
AND hire_date < (SELECT hire_date FROM employees WHERE last_name =
'Zlotkey');
```

36. Arrange all the employees having the same department as Zlotkey using salary, and display first_name, last_name and the salary.

```
SELECT first_name, last_name, salary
FROM employees
WHERE department_id = (SELECT department_id FROM employees WHERE
last_name = 'Zlotkey')
ORDER BY salary;
```

37. Increase the salary by 500 and display the first_name, the last_name, the salary, and the new salary for employees hired after Zlotkey.

```
SELECT first_name, last_name, salary, salary + 500
FROM employees
WHERE hire_date > (SELECT hire_date FROM employees WHERE last_name =
'Zlotkey');
```

38. Display all the information about employees who earn more than the average salary for employees having job_id = AD_VP.

```
SELECT *
FROM employees
WHERE salary > (SELECT AVG(salary) FROM employees WHERE job_id =
'AD_VP');
```

39. Display the first_name and the last_name in the same column “Name” for employees having the same job_id as Zlotkey.

```
SELECT first_name || ' ' || last_name AS "Name"
FROM employees
WHERE job_id = (SELECT job_id FROM employees WHERE last_name = 'Zlotkey');
```

40. Display first_name, last_name, and the salary from employees who earn more than the minimum salaries for employees havind department_id=50, 80 or 90.
    SELECT first_name, last_name, salary
    FROM employees
    WHERE salary > (SELECT MIN(salary) FROM employees WHERE department_id IN (50, 80, 90));

41. Display the first_name, the last_name, and the salary for employees hired after Rajs.
    SELECT first_name, last_name, salary
    FROM employees
    WHERE hire_date > (SELECT hire_date FROM employees WHERE last_name = 'Rajs');

42. Display the first_name, the last_name, and the salary for employees who earn more than the maximum salaries for all the employees having department_id=50.
    SELECT first_name, last_name, salary
    FROM employees
    WHERE salary > (SELECT MAX(salary) FROM employees WHERE department_id = 50);

43. Display the first_name, the last_name, the salary, the department_name and the department_id for employees having the same manager_id as Matos.

44. Display first_name, last_name, and the salary from employees who earn more than the minimum salaries for employees hired after Matos.
    SELECT first_name, last_name, salary
    FROM employees
    WHERE salary > (SELECT MIN(salary) FROM employees WHERE hire_date > (SELECT hire_date FROM employees WHERE last_name = 'Matos'));

45. Display the first_name, the last_name, and the salary for employees hired before Grant.
    SELECT first_name, last_name, salary
    FROM employees
    WHERE hire_date < (SELECT hire_date FROM employees WHERE last_name = 'Grant');

46. Display the first_name, the last_name, and the salary for employees who earn more than Grant.
    SELECT first_name, last_name, salary
    FROM employees
    WHERE salary > (SELECT salary FROM employees WHERE last_name = 'Grant');

48.Display the first_name, the last_name, and the salary fror employees having the same manager as Davies.
SELECT first_name, last_name, salary
FROM employees
WHERE manager_id = (SELECT manager_id FROM employees WHERE last_name = 'Davies');

49.Display the first_name, the last_name, and the salary for employees having the same job_id as Grant.
SELECT first_name, last_name, salary
FROM employees
WHERE job_id = (SELECT job_id FROM employees WHERE last_name = 'Grant');

50.Display the first_name, the last_name, and the salary for employees hired after Matos.
SELECT first_name, last_name, salary
FROM employees
WHERE hire_date > (SELECT hire_date FROM employees WHERE last_name = 'Matos');

51.Display the first_name, the last_name, and the salary for employees who earn more than the average salaries for all the employees having manager_id=124.
SELECT first_name, last_name, salary
FROM employees
WHERE salary > (SELECT AVG(salary) FROM employees WHERE manager_id = 124);

52.Display the first_name, the last_name, and the salary from employees having the same job_id as Abel.
SELECT first_name, last_name, salary
FROM employees
WHERE job_id = (SELECT job_id FROM employees WHERE last_name = 'Abel');

53.Display the first_name, the last_name, the salary from employees who earn more than Vargas(last_name).

```
SELECT first_name, last_name, salary
FROM employees
WHERE salary > (SELECT salary FROM employees WHERE last_name = 'Vargas');
```

54.Display all the information about employees who are in the same department as Vargas.

```
SELECT *
FROM employees
WHERE department_id = (SELECT department_id FROM employees WHERE last_name
= 'Vargas');
```

55.Display the first_name, the last_name, and the salary from employees who earn less than Abel.

```
SELECT first_name, last_name, salary
FROM employees
WHERE salary < (SELECT salary FROM employees WHERE last_name = 'Abel');
```

56.Display the first_name, the last_name, and the salary from employees hired after Abel.

```
SELECT first_name, last_name, salary
FROM employees
WHERE hire_date > (SELECT hire_date FROM employees WHERE last_name = 'Abel');
```

57.Display the first_name, the last_name, and the salary from employees having the hire_date as Abel.

```
SELECT first_name, last_name, salary
FROM employees
WHERE hire_date = (SELECT hire_date FROM employees WHERE last_name = 'Abel');
```

58.Display the first_name, the last_name, and the salary from employees having the same department as King.

```
SELECT first_name, last_name, salary
FROM employees
WHERE department_id = (SELECT department_id FROM employees WHERE last_name
= 'King');
```

59.Display the first_name, the last_name, and the salary from employees having the same job_id as Abel.

```
SELECT first_name, last_name, salary
FROM employees
WHERE job_id  = (SELECT job_id  FROM employees WHERE last_name = 'Abel');
```

60.Arrange all the employees having the same department as Abel using salary, and display first_name, last_name and the salary.

```
SELECT first_name, last_name, salary
FROM employees
WHERE department_id  = (SELECT department_id  FROM employees WHERE last_name = 'Abel')
ORDER BY salary;
```

61.Display the biggest salary for employees having department_id=80.

```
SELECT MAX(salary)
FROM employees
WHERE department_id=80;
```

62.Display the first_name, the last_name and the department_id for employees having the biggest salary.

```
SELECT first_name, last_name, department_id
FROM employees
WHERE salary = (SELECT MAX(salary) FROM employees);
```

63.Display the first_name, the last_name and the department_id for the last employee in the alphabetic list of names

```
SELECT first_name, last_name, department_id
FROM employees
ORDER BY last_name DESC;
```

64.Display the first_name, the last_name and the department_id for employees who earn more than the average salary.

```
SELECT first_name, last_name, department_id
FROM employees
WHERE salary > (SELECT AVG(salary) FROM employees);
```

65.Display the minimum salary of employees in each department.

```
SELECT department_id, MIN(salary)
FROM employees
GROUP BY department_id;
```

66.Display the average salary of employees for each job_id and order by job_id. Round the average with two decimal places.

```
SELECT job_id, ROUND(AVG(salary), 2)
FROM employees
GROUP BY job_id
ORDER BY job_id;
```

67.Arrange in descending order according to department_id and display the employees' minimum salary for each department_id.

```
SELECT department_id, MIN(salary)
FROM employees
GROUP BY department_id
ORDER BY department_id DESC;
```

68.Display the average salary of employees for each job_id ≠ st_clerk and order by job_id.

```
SELECT job_id, AVG(salary)
FROM employees
WHERE job_id != 'ST_CLERK'
GROUP BY job_id
ORDER BY job_id;
```

69.Display the biggest salary for each job_id ≠ st_clerk. Group the data using job_id.

```
SELECT job_id, MAX(salary)
FROM employees
WHERE job_id != 'ST_CLERK'
GROUP BY job_id;
```

70.Arrange all the employees hired after Abel using salary, and display first_name, last_name, salary and the hire_date.

```
SELECT first_name, last_name, salary, hire_date
FROM employees
WHERE hire_date > (SELECT hire_date FROM employees WHERE last_name = 'Abel')
ORDER BY salary;
```

71.Decrease the salary by 200 and display the first_name, the last_name, the salary, and the new salary for employees hired after Abel.

```
SELECT first_name, last_name, salary, salary-200
FROM employees
WHERE hire_date > (SELECT hire_date FROM employees WHERE last_name = 'Abel');
```

72.Display the first_name, the last_name, and the salary from employees having the same manager as Vargas.

```
SELECT first_name, last_name, salary
FROM employees
WHERE manager_id = (SELECT manager_id FROM employees WHERE last_name =
'Vargas');
```

73.Arrange all the employees having the same department as Ellen using salary, and display first_name, last_name and the salary.

```
SELECT first_name, last_name, salary
FROM employees
WHERE department_id = (SELECT department_id FROM employees WHERE last_name
= 'Ellen')
ORDER BY salary;
```

74.Arrange all the employees hired after Ellen using salary, and display first_name, last_name, salary and the hire_date.

```
SELECT first_name, last_name, salary, hire_date
FROM employees
WHERE hire_date > (SELECT hire_date FROM employees WHERE last_name = 'Ellen')
ORDER BY salary;
```

75.Display the average salary for employees where job_id = ST_CLERK.

```
SELECT AVG(salary)
FROM employees
WHERE job_id = 'ST_CLERK';
```

76.Display all the information about employees who earn more than the average salary for employees where job_id = ST_CLERK.

```
SELECT *
FROM employees
WHERE salary > (SELECT AVG(salary) FROM employees WHERE job_id = 'ST_CLERK');
```

77.Display the first_name and the last_name in the same column “Name” for employees having the same job_id as Mourgos.

```
SELECT first_name || ' ' || last_name AS "Name"
FROM employees
WHERE job_id = (SELECT job_id FROM employees WHERE last_name = 'Mourgos');
```

78.Display first_name, last_name, and the salary from employees who earn more than the minimum salaries for employees hired after Mourgos.

```
SELECT first_name, last_name, salary
FROM employees
WHERE salary > (SELECT MIN(salary)FROM employees WHERE hire_date > (SELECT hire_date FROM employees WHERE last_name = 'Mourgos'));
```
