

ONLINE SHOP

You have just been awarded the contract to develop a data model for a database application system for an online shop.

Online Client's need for an e-commerce website upgrade

1. Problem with current platform impacting sales and customer happiness
 - Proposed solution: Development of a fresh, reliable e-commerce website
2. Key features: Simple and user-friendly layout; Expedited checkout; Improved product listing
3. Advance Features: Wishlist; Loyalty programs; Customer accounts
4. Emphasize collaboration with the client for a tailored online shopping experience

Information Requirements:

Collecting customer information, sales and product data

Optional: Gathering user activity data (browsing history, review)

Tasks:

- Identify the entities, the attributes and data type for each attribute.
- Create the ERD
- Create the tables
- Insert more than five rows in each table
