

For all the following questions use EMPLOYEES table:

1. Display all the information about employees.

```
SELECT *  
FROM employees
```

2. Display all the information for employees having manager_id=124.

```
SELECT *  
FROM employees  
WHERE manager_id=124
```

3. Display all the information about employees having salary<4500.

```
SELECT *  
FROM employees  
WHERE salary<4500
```

4. Display the first_name, last_name and the salary.

```
SELECT first_name, last_name, salary  
FROM employees
```

5. Display all the information about the employees having department_id ≠ 50.

```
SELECT *  
FROM employees  
WHERE department_id != 50
```

6. Display all the information about the employees having salary between 4000 and 5000 and department_id ≠ 50.

```
SELECT *  
FROM employees  
WHERE department_id != 50 and salary between 4000 and 5000
```

6. Display all the information about the employees having job_id=sa_man.

```
SELECT *  
FROM employees  
WHERE job_id='SA_MAN'
```

7. Display all the information about the employees having job_id = "IT_PROG" or ST_CLERK.

```
SELECT *  
FROM employees  
WHERE job_id in ('IT_PROG','ST_CLERK')
```

8. Display all the information about the employees having job_id = ST_CLERK and the salary>4000.

```
SELECT *  
FROM employees  
WHERE job_id='ST_CLERK' and salary>4000
```

10. Display the last_name and the first_name in a new column "Name".

```
SELECT last_name || ' ' || first_name as "NAME"  
FROM employees
```

11. Display the last_name and the first_name in a new column "Name" for employees having job_id=ST_CLERK.

```
SELECT last_name || ' ' || first_name as "NAME"  
FROM employees  
WHERE job_id='ST_CLERK'
```

12. Display all the information from employees having salary between 4000 and 4200 (two methods).

```
SELECT *  
FROM employees  
WHERE salary between 4000 and 4200
```

```
SELECT *  
FROM employees  
where salary>4000 and salary<4200
```

13. Increase the salary by 5% for employees hired after 01.01.95 and display the last_name, the new salary and the department_id.

```
SELECT last_name, salary+salary*0.05 as "new salary", department_id  
FROM employees  
WHERE hire_date>'01-Jan-1995'
```

14. Decrease the salary by 7% and display the first_name, last_name, the old salary and the new salary.

```
SELECT first_name, last_name, salary, salary-salary*0.07  
FROM employees
```

15. Increase the salary by 100 euros and display the last_name, the new salary and the department_id.

```
SELECT last_name, salary+100, department_id  
FROM employees
```

16. Decrease the salary by 200 euros and display the first_name, last_name, the old salary and the new salary.

```
SELECT first_name, last_name, salary, salary-200  
FROM employees
```

17. Display the first_name, the last_name and the salary for all the employees having hire_date between 01.01.1995 and 31.12.1999 (two methods).

```
SELECT first_name, last_name, salary  
FROM employees  
WHERE hire_date between '01-Jan-1995' and '31-Dec-1999'
```

```
SELECT first_name, last_name, salary  
FROM employees  
WHERE hire_date > '01-Jan-1995' and hire_date < '31-Dec-1999'
```

18. Increase the salary of employees having job_id = IT_PROG, by 10%. Display the first_name, the last_name, the salary, the job_id and the new salary.

```
SELECT first_name, last_name, salary, job_id, salary+salary*0.10  
FROM employees  
WHERE job_id = 'IT_PROG'
```

19. Using a substitution variable (dept_id), display the first_name, the last_name, the department_id, and the salary for employees having first, department_id=80 and after department_id=50.

```
SELECT first_name, last_name, department_id, salary  
FROM employees  
WHERE department_id = :enter_dept_id
```

20. Using two substitution variables (dept_id, and mang_id), display the first_name, the last_name, the department_id, and the manager_id for employees having department_id=50 and manager_id=124.

```
SELECT first_name, last_name, department_id, manager_id  
FROM employees  
WHERE department_id = :enter_dept_id and manager_id = :enter_mang_id
```

21. Using a substitution variable(dept_id), display the first_name, the last_name, the department_id, and the salary for employees having department_id=80 and salary>9000.

```
SELECT first_name, last_name, department_id, salary
FROM employees
WHERE department_id=:enter_dept_id and salary>:enter_salary
```

22. Using a substitution variable(job_id), display the last_name, the department_id, and the job_id for employees having job_id=st_clerk.

```
SELECT last_name, department_id, job_id
FROM employees
WHERE job_id=:enter_job_id
```

23. Display the first_name, last_name and salary for employees having department_id=80 or 90 using substitution variables.

```
SELECT first_name, last_name, salary
FROM employees
WHERE department_id=:enter_dept_id
```

24. Display the first_name, last_name, hire_date and salary for employees having bonus.

```
SELECT first_name, last_name, hire_date, salary
FROM employees
WHERE bonus!=0
```

25. Increase the salary by bonus and display the last_name, the salary, the bonus and the new salary for employees having department_id=80, 50 or 90 using substitution variables.

```
SELECT last_name, salary, bonus, salary+bonus
FROM employees
WHERE bonus!=0 and department_id=:enter_dept_id
```

26. Display the first_name and the last_name in a new column „New“, and the department_id for employees having department_id=80 or 90.

```
SELECT last_name || ' ' || first_name as "NAME", department_id
FROM employees
WHERE department_id=:enter_dept_id
```

27. Display the first_name and the last_name in a new column „New“, and the salary for employees having department_id= 80, 90 or 50 using substitution variables.

```
SELECT last_name || ' ' || first_name as "NAME", salary  
FROM employees  
WHERE department_id=:enter_dept_id
```

28. Display all the information about the employees having last_name starting with „M” or with „K”.

```
Select *  
from employees  
where last_name like 'M%' or last_name like 'K%'
```

29. Display the minimum salary for employees.

```
Select avg(salary)  
from employees
```

30. Display the average of the salary and round the result to 2 decimal places for employees having department_id=50 or 80.

```
Select round(avg(salary),2)  
from employees  
WHERE department_id=50 or department_id=80
```

31. Display the first_name in uppercase for all the employees having department_id=50 or 80.

```
Select upper(first_name)  
from employees  
WHERE department_id=50 or department_id=80
```

32. Display all the information about employees having department_id=80 hired after 01.01.1998.

```
Select *  
from employees  
WHERE department_id=80 and hire_date>'01-Jan-1998'
```

33. Display all the information from employees having department_id= 50 and job_id=SA_REP using two substitution variables.

```
Select *  
from employees  
WHERE department_id=:80 and job_id=:SA_REP
```

34. Using a group function, display the last name of the last employee in alphabetical order.

```
Select *  
from employees  
order by last_name
```

35. Increase the salary by bonus and display the last_name, the old salary, the bonus, the new salary using an alias for department_id=80 and manager_id=149 using two substitution variables

```
SELECT last_name, salary, bonus, salary+bonus as "New Salary"  
FROM employees  
WHERE department_id=:enter_dept_id and manager_id=:enter_mang_id
```

36. Display all the information from employees having job_id= AD_VP or ST_CLERK (two methods).

```
SELECT *  
FROM employees  
WHERE job_id in ('AD_VP','ST_CLERK')
```

```
SELECT *  
FROM employees  
WHERE job_id='AD_VP' or job_id='ST_CLERK'
```
