

For all the following questions use the table EMPLOYEES:

1. Display all the information about the employees having job_id=sa_man or sa_rep(two methods).

```
Select *  
from employees  
where job_id='SA_MAN' or job_id='SA_REP'
```

```
Select *  
from employees  
where job_id in ('SA_MAN','SA_REP')
```

2. Display the first_name, last_name and the salary from employees having the salary>8000.

```
Select first_name, last_name, salary  
from employees  
where salary>8000
```

3. Display the first_name, last_name and the salary from employees having the salary>8000 and hired after 01.01.1990.

```
Select first_name, last_name, salary  
from employees  
where salary>8000 and hire_date>'01-Jan-1990'
```

4. Display all the information about the employees having job_id = AD_PREP and the salary>9000.

```
Select *  
from employees  
where job_id='SA_REP' and salary>9000
```

5. Display the last_name and the first_name in a new column "Name" from employees having department_id=50.

```
Select last_name || ' ' || first_name as "Name"  
from employees  
where department_id=50
```

For all the following questions use the table EMPLOYEES:

6. Display the last_name and the first_name in a new column "Name" from employees having manager_id=101, 124 or 149(two methods).

```
Select last_name || ' ' || first_name as "Name"
```

```
from employees
```

```
where manager_id=101 or manager_id=124 or manager_id=149
```

```
Select last_name || ' ' || first_name as "Name"
```

```
from employees
```

```
where manager_id in (101, 124, 149)
```

7. Display the last_name and the first_name in a new column "Name" from employees having salary>7500.

```
Select last_name || ' ' || first_name as "Name"
```

```
from employees
```

```
where salary>7500
```

8. Display all the informations about employees having first_name starting with „K”.

```
Select *
```

```
from employees
```

```
where first_name like 'K%'
```

9. Display the first_name, last_name and the salary for employees having the first_name starting with „M”.

```
Select first_name, last_name, salary
```

```
from employees
```

```
where first_name like 'M%'
```

10. Display all the information from employees having salary between 11000 and 17000 (two methods).

```
Select *
```

```
from employees
```

```
where salary>11000 and salary<17000
```

```
Select *
```

```
from employees
```

```
where salary between 11000 and 17000
```

11. Display the first_name and the hire_date in a new column having the format "Steven was hired on 17-Jun-1987"

```
Select first_name || ' hired on ' || hire_date
```

```
from employees
```

For all the following questions use the table EMPLOYEES:

12. Increase the salary by 300 euros and display the last_name, the new salary in a new column "new_salary" and the department_id.

```
Select last_name, salary+300 as "new_salary", department_id  
from employees
```

13. Decrease the salary by 200 euros and display the first_name, last_name, the old salary and the new salary.

```
Select last_name, salary, salary-200, department_id  
from employees
```

14. Increase the salary by 12% euros and display the last_name, the new salary and the department_id.

```
Select last_name, salary+salary*0.12, department_id  
from employees
```

15. Decrease the salary by 7% and display the first_name, last_name, the old salary and the new salary from employees hired after 01.01.1999.

```
Select first_name, last_name, salary, salary-salary*0.07, department_id  
from employees  
where hire_date>'01-Jan-1999'
```

16. Increase the salary of employees having job_id "SA_MAN" or AD_VP by 15% and display first_name, last_name, salary and the new salary using an alias.

```
Select first_name, last_name, salary, salary+salary*0.15  
from employees  
where job_id in ('SA_MAN', 'AD_VP')
```

17. Increase the salary from employees hired after 01.01.95 by 10%.

```
Select salary-salary*0.10  
from employees  
where hire_date>'01-Jan-1995'
```

18. Display all the information about the employees having hire_date between 01.01.1990 and 01.05.1999.

```
Select *  
from employees  
where hire_date between '01-Jan-1990' and '01-May-1999'
```

For all the following questions use the table EMPLOYEES:

19. Display the first_name, the last_name and the salary for all the employees having hire_date between 01.01.1993 and 31.12.1999 (two methods).

```
Select first_name, last_name, salary
```

```
from employees
```

```
where hire_date between '01-Jan-1993' and '31-Dec-1999'
```

```
Select first_name, last_name, salary
```

```
from employees
```

```
where hire_date > '01-Jan-1993' and hire_date < '31-Dec-1999'
```

20. Display all the information about employees hired before 01.01.1996.

```
Select *
```

```
from employees
```

```
where hire_date < '01-Jan-1996'
```

21. Display all the information about the employees having dept_id = 200 and the salary < 12000.

```
Select *
```

```
from employees
```

```
where salary < 12000 and department_id = 200
```

22. Display all the information from employees having manager_id = 100 or 149 (two methods).

```
Select *
```

```
from employees
```

```
where manager_id in (100, 149)
```

```
Select *
```

```
from employees
```

```
where manager_id = 100 or manager_id = 149
```

23. Decrease the salary of employees having job_id = ad_pres, by 3%. Display the first_name, the last_name, the salary, the job_id and the new salary.

```
Select first_name, last_name, salary, job_id, salary - salary * 0.03
```

```
from employees
```

```
where job_id = 'AD_PRES'
```

24. Display all the information about the employees having manager_id = 149 and the salary < 9000.

```
Select * from employees
```

```
where manager_id = 149 and salary < 9000.
```

For all the following questions use the table EMPLOYEES:

25. Display the first_name, last_name and salary for employees having department_id=80 or 90 (two methods).

```
Select first_name, last_name, salary  
from employees  
where department_id in (80, 90)
```

```
Select first_name, last_name, salary  
from employees  
where department_id=80 or department_id=90
```

26. Display all the information from departments having manager_id between 150 and 201.

```
Select *  
from employees  
where manager_id between 150 and 201
```

27. Display the first_name, last_name, hire_date and salary for employees having bonus.

```
Select first_name, last_name, hire_date, salary  
from employees  
where bonus!=0
```

28. Display all the information about the employees having salary between 7000 and 10000 and department_id=80.

```
Select *  
from employees  
where salary between 7000 and 10000 and department_id=80
```

29. Display the first_name and the last_name in a new column „New“, and the department_id for employees having department_id=80 or 90.

```
Select first_name || ' ' || last_name as "New", department_id  
from employees  
where department_id in (80, 90)
```

30. Display the first_name and the last_name in a new column „New“, and the salary for employees having department_id= 80, 90 or 50.

```
Select first_name || ' ' || last_name as "New", salary  
from employees  
where department_id in (80, 90, 50)
```

For all the following questions use the table EMPLOYEES:

31. Display all the information about the employees having last_name starting with „M” or with „T”.

```
Select *  
from employees  
where last_name like 'M%' or last_name like 'T%'
```

32. Display all the information about employees having commission_pct.

```
Select *  
from employees  
where commission_pct!=0
```

33. Display all the information about the employees having job_id “SA_CLERK” or “SA_REP” and the salary<7000.

```
Select *  
from employees  
where job_id in ('ST_CLERK', 'SA_REP') and salary<7000
```

34. Display the average of the salary for employees having job_id= st_clerk.

```
Select avg(salary)  
from employees  
where job_id in ('ST_CLERK')
```

35. Display the average of the salary for employees having job_id= st_clerk and salary<3000 and round the result to 1 decimal place.

```
Select round(avg(salary),1)  
from employees  
where job_id in ('ST_CLERK') and salary<3000
```

36. Display all the information for employees having job_id=st_clerk and arrange in descending order according to salary.

```
Select *  
from employees  
where job_id in ('ST_CLERK')  
order by salary DESC
```

For all the following questions use the table EMPLOYEES:

37. Display the first_name and the last_name in uppercase in a new column „New“, and the department_id for employees having department_id=80 or 90 (two methods).

```
Select upper(first_name)||' '|| upper(last_name) as "New", department_id  
from employees  
where department_id in (80, 90)
```

```
Select upper(first_name)||' '|| upper(last_name) as "New", department_id  
from employees  
where department_id=80 or department_id=90
```

38. Display the last names of all employees who have “o” or “a” in their last names.

```
Select last_name  
from employees  
where last_name like '%o%' or last_name like '%a%'
```

39. Display all the information about the employees having last_name starting with „M” or with „K”.

```
Select *  
from employees  
where last_name like 'M%' or last_name like 'K%'
```

40. Display all the information about the employees having manager_id 149 or 124 (two methods).

```
Select *  
from employees  
where manager_id=149 or manager_id=124
```

```
Select *  
from employees  
where manager_id in (149, 124)
```

41. Display the maximum of the salary for employees having job_id=ad_vp.

```
Select max(salary)  
from employees  
where job_id in ('AD_VP')
```

42. Display the maximum of the salary for employees having job_id=ad_vp or st_clerk.

```
Select max(salary)  
from employees  
where job_id in ('AD_VP', 'ST_CLERK')
```

For all the following questions use the table EMPLOYEES:

43. Display the average of the salary and round the result to 2 decimal places for employees having job_id=ad_vp or st_clerk.

```
Select round(avg(salary),2)
from employees
where job_id in ('AD_VP', 'ST_CLERK')
```

44. Display the first_name, the last_name, the commission_pct and the salary for employees having commission_pct. Arrange in order according to salary.

```
Select first_name, last_name, commission_pct, salary
from employees
where commission_pct!=0
order by salary
```

45. Increase the salary of employees having job_id "SA_MAN" or AD_VP by 5% and display first_name, last_name, salary and the new salary using an alias.

```
Select first_name, last_name, salary, salary+salary*0.05 as "new_salary"
from employees
where job_id in ('AD_VP', 'ST_CLERK')
```

46. Decrease the salary of employees by 5% and display first_name, last_name, salary and the new salary for employees having manager_id=149 or 100.

```
Select first_name, last_name, salary, salary-salary*0.05 as "new_salary"
from employees
where manager_id in (149 , 100)
```

47. Arranging in descending order according to salary all the employees.

```
Select *
from employees
order by salary DESC
```

48. Arrange in descending order according to salary and display first_name, last_name, salary.

```
Select first_name, last_name, salary
from employees
order by salary DESC
```

49. Arranging in descending order according to hire_date and display first_name, last_name, salary and the hire_date.

```
Select first_name, last_name, salary, hire_date
from employees
order by hire_date DESC
```

For all the following questions use the table EMPLOYEES:

50. Decrease the salary of employees having job_id= ad_pres, by 5%. Display the first_name, last_name, the salary, and the new salary.

```
Select first_name, last_name, salary, salary-salary*0.05  
from employees  
where job_id='AD_PREP'
```

51. Display all the information about employees hired before 01.01.1996.

```
Select *  
from employees  
where hire_date<'01-Jan-1996'
```

52. Display the maximum of salaries for employees hired after 01.01.1999.

```
Select max(salary)  
from employees  
where hire_date>'01-Jan-1999'
```

53. Display the maximum of salaries for employees having job_id = st_clerk.

```
Select max(salary)  
from employees  
where job_id='ST_CLERK'
```

54. Display the minimum of salaries for employees having department_id =174.

```
Select min(salary)  
from employees  
where department_id=174
```

55. Display the sum of salaries for employees having hire_date>01.01.1995.

```
Select sum(salary)  
from employees  
where hire_date>'01-Jan-1995'
```

56. Display the average of the salary and round the result to 2 decimal places for employees having job_id=ad_pres.

```
Select round(avg(salary),2)  
from employees  
where job_id='AD_PREP'
```

57. Display the maximum of salaries for employees having job_id = ad_pres or sa_man.

```
Select max(salary)  
from employees  
where job_id in ('AD_PREP', 'ST_MAN')
```

For all the following questions use the table EMPLOYEES:

58.Display the minimum of salaries for employees having department_id=50 or 80.

```
Select min(salary)
from employees
where department_id in (50,80)
```

59.Display the sum of salaries for employees hired after 01.12.1998.

```
Select sum(salary)
from employees
where hire_date>'01-Dec-1998'
```

60.Display the average of the salary for employees having job_id=sa_man.

```
Select avg(salary)
from employees
where job_id='SA_MAN'
```

61.Display the average of the salary for employees having department_id >70 and the salary<12000.

```
Select avg(salary)
from employees
where department_id >70 and salary<12000
```
