

EXDON 10.01.2025

1. Create the EMPLNEW1 table with the following structure:

Table Name: **EMPLNEW1** ?

☐ Preserve Case

Column Name	Type	Precision	Scale
dept_id	NUMBER	4	
first_name	CHAR		40
last_name	CHAR		40
email	CHAR		40
phone_number	NUMBER	15	
hire_date	DATE		
job_id	CHAR		30
salary	NUMBER	10	2
bonus	NUMBER	6	2

2. Insert rows into the table created based on the following table:

EMPLNEW1								
Indexes Model Constraints Grants Statistics UI Defaults Triggers Dependencies SQL REST Sample Queries								
Count Rows	Insert Row	Load Data						
DEPT_ID	FIRST_NAME	LAST_NAME	EMAIL	PHONE_NUMBER	HIRE_DATE	JOB_ID	SALARY	BONUS
65	Leena	Thill	ldehaan	5151234569	15-Jan-2004	AD_VP	17373.15	0
80	Alain	Kahler	akhaler	7845632179	07-May-2003	ADMIN	9786.34	11.45
70	Jonathon	Taylor	jtaylor	1644429265	24-Mar-2004	SA_MAN	8673.89	62.83
80	Ellen	Thomas	eabel	1644429267	11-May-2004	ADMIN	11000.24	75.28
60	Alice	Zarea	azarea	3456272865	08-Feb-2007	IT_PROG	2013.78	0
60	Jennifer	Whalen	jwhalen	5151234444	17-Sep-2005	IT_PROG	4487.65	76.99
60	Shelley	Higgins	shiggins	5151238080	07-Jun-2004	IT_PROG	12113.4	0
60	Sting	Karlos	sking	5151234567	17-Jun-2004	IT_PROG	24385.56	234.67

EXDON 10.01.2025

For all the following questions use EMPLNEW1 table:

1. Display all the information about the employees.

```
SELECT *  
FROM EMPLNEW1
```

2. Display the last_name and the first_name with uppercase letters in one column.

```
SELECT upper(last_name) || " " || upper(first_name)  
FROM EMPLNEW1
```

3. Display the sum of the salary for employees having job_id= IT_PROG or ADMIN.

```
SELECT sum(salary)  
FROM EMPLNEW1  
WHERE job_id in ('IT_PROG', 'ADMIN')
```

4. Increase the salary of employees by 5% and display the last_name, the first_name the salary, and the new salary.

```
SELECT last_name, first_name, salary, salary+salary*0.05  
FROM EMPLNEW1
```

5. Increase the salary of employees by bonus and display all the information.

```
SELECT DEPT_ID, FIRST_NAME, LAST_NAME, EMAIL, PHONE_NUMBER, HIRE_DATE,  
JOB_ID, SALARY+Bonus, BONUS  
FROM EMPLNEW1
```

6. Decrease the salary of employees by 7% and display the last_name, the first_name the salary, and the new salary. Use an alias(NEW_SALARY) to display the new salary.

```
SELECT last_name, first_name, salary, salary-salary*0.07 as "New Salary"  
FROM EMPLNEW1
```

7. Display all the information about the employees having job_id "IT_PROG" and the salary<15000.

```
SELECT *  
FROM EMPLNEW1  
WHERE job_id ='IT_PROG' and salary<15000
```

8. Display the average of the salary for employees having job_id= IT_PROG.

```
SELECT avg(salary)  
FROM EMPLNEW1  
WHERE job_id ='IT_PROG'
```

EXDON 10.01.2025

9. Display all the information for employees having job_id=IT_PROG and arrange in descending order according to salary.

```
SELECT *  
FROM EMPLNEW1  
WHERE job_id ='IT_PROG'  
order by salary DESC
```

10. Display the first_name and the last_name in uppercase in a new column „New“, and the dept_id for employees having dept_id=60 or 80(two methods).

```
SELECT upper(last_name) || " " || upper(first_name) as "New", dept_id  
FROM EMPLNEW1  
WHERE dept_id in (60, 80)
```

```
SELECT upper(last_name) || " " || upper(first_name) as "New", dept_id  
FROM EMPLNEW1  
WHERE dept_id=60 or dept_id=80
```

11. Display the first_name, the last_name the salary and the dept_id for employees having dept_id >65.

```
SELECT first_name, last_name, salary, dept_id  
FROM EMPLNEW1  
WHERE dept_id >65
```

12. Display the last names of all employees who have “o” or “a” in their last names.

```
SELECT last_name  
FROM EMPLNEW1  
WHERE last_name like '%o%' or last_name like '%a%'
```

13. Display all employees whose last names start with “K” or „Z“. Arrange in order according to salary.

```
SELECT last_name  
FROM EMPLNEW1  
WHERE last_name like 'K%' or last_name like 'Z%'  
order by salary
```

14. Display all the information about the employees hired after 1st January 2004.

```
SELECT *  
FROM EMPLNEW1  
WHERE hire_date > '01-Jan-2004'
```

EXDON 10.01.2025

15.Display the maximum of the salary for employees having job_id=AD_VP or IT_PROG.

```
SELECT max(salary)
FROM EMPLNEW1
WHERE job_id in ('AD_VP', 'IT_PROG')
```

16.Display the average of the salary and round the result to 2 decimal places for employees having job_id=AD_VP or IT_PROG.

```
SELECT round(avg(salary),2)
FROM EMPLNEW1
WHERE job_id in ('AD_VP', 'IT_PROG')
```

17.Display the first_name, the last_name, the dept_id and the salary for employees having bonus. Arrange in order according to salary.

```
SELECT first_name, last_name, dept_id, salary
FROM EMPLNEW1
WHERE bonus!=0
```

18.Increase the salary of employees having job_id IT_PROG or AD_VP by 5% and display first_name, last_name, salary and the new salary using an alias.

```
SELECT first_name, last_name, salary, salary+salary*0.05 as "New salary"
FROM EMPLNEW1
WHERE job_id in ('AD_VP', 'IT_PROG')
```

19.Decrease the salary of employees by 5% and display first_name, last_name, salary and the new salary for employees having dept_id=70 or 80.

```
SELECT first_name, last_name, salary, salary-salary*0.05
FROM EMPLNEW1
WHERE dept_id in (70, 80)
```

20.Display all the information about the employees having salary between 10000 and 15000.

```
SELECT *
FROM EMPLNEW1
WHERE salary between 10000 and 15000
```

21.Display the email in uppercase and the job_id with small lettres in a new column „New”.

```
SELECT upper(email) || lower(job_id) as "New"
FROM EMPLNEW1
```

EXDON 10.01.2025

22. Arrange in order according to salary and display first_name, last_name, salary.

```
SELECT first_name, last_name, salary  
FROM EMPLNEW1  
ORDER by salary
```

23. Display all the information about the employees having job_id=IT_PROG.

```
SELECT *  
FROM EMPLNEW1  
WHERE job_id='IT_PROG'
```

24. Display the last_name and the first_name in capital letters in a new column "Name" for employees having dept_id=80.

```
SELECT upper(last_name) || upper(first_name) as "Name"  
FROM EMPLNEW1  
WHERE dept_id=80
```

25. Write a query to return the first character of the first name concatenated to the last_name and the salary for employees.

```
SELECT SUBSTR(first_name, 1, 1) || '|' || last_name, salary  
FROM EMPLNEW1
```

26. Write a query to return the first character of the first name concatenated to the last_name, the salary, and the dept_id for employees having dept_id=60, 65 or 70 (two methods).

```
SELECT SUBSTR(first_name, 1, 1) || '|' || last_name, salary, dept_id  
FROM EMPLNEW1  
WHERE dept_id in (60, 65, 70)
```

```
SELECT SUBSTR(first_name, 1, 1) || '|' || last_name, salary, dept_id  
FROM EMPLNEW1  
WHERE dept_id=60 or dept_id=65 or dept_id=70)
```

27. Increase the bonus for employees hired after 01.01.2005 by 10%, and display all the information.

```
SELECT DEPT_ID, FIRST_NAME, LAST_NAME, EMAIL, PHONE_NUMBER, HIRE_DATE,  
JOB_ID, SALARY, BONUS+BONUS*0.1  
FROM EMPLNEW1  
WHERE hire_date>'01-Jan-2005'
```

EXDON 10.01.2025

28. Arrange in order according to salary and display first_name, last_name, salary.

```
SELECT first_name, last_name, salary  
FROM EMPLNEW1  
Order by salary
```

29. Arranging in alphabetical order all the employees (use salary) and display all the informations for employees having dept_id= 60 or 65.

```
SELECT *  
FROM EMPLNEW1  
WHERE dept_id in (60, 65)  
Order by salary
```

30. Arranging in descending order according to hire_date and display first_name, last_name, salary.

```
SELECT first_name, last_name, salary  
FROM EMPLNEW1  
Order by hire_date DESC
```

31. Decrease the bonus of employees having job_id= IT_PROG, by 3%. Display the first_name, the last_name, the salary, the job_id and the new bonus.

```
SELECT first_name, last_name, salary, job_id, bonus-bonus*0.03  
FROM EMPLNEW1  
WHERE job_id= 'IT_PROG'
```

32. Display all the information about the employees hired between January 1, 2004 and December 31, 2005.

```
SELECT *  
FROM EMPLNEW1  
WHERE hire_date between '01-Jan-2004' and '31-Dec-2005'
```

33. Display the maximum of bonus for all the employees.

```
SELECT max(bonus)  
FROM EMPLNEW1
```

34. Display the minimum of bonus for employees having dept_id=80.

```
SELECT max(bonus)  
FROM EMPLNEW1  
WHERE dept_id=80
```

EXDON 10.01.2025

35.Using a substitution variable, display the first_name, the last_name, the dept_id, and the salary for employees having dept_id=70 or 60.

```
SELECT first_name, last_name, dept_id, salary  
FROM EMPLNEW1  
WHERE dept_id=:enter_dept_id
```

36.Using a substitution variable for job_id, display the first_name, the last_name, the dept_id, and the job_id for employees having job_id=IT_PROG or ADMIN.

```
SELECT first_name, last_name, dept_id, job_id  
FROM EMPLNEW1  
WHERE job_id =:enter_job_id;
```

37.Using a substitution variable for dept_id, display the first_name, the last_name, the dept_id, the hire_date and the salary for employees having department_id=80 or 50 and hired after 01.05.1998.

```
SELECT first_name, last_name, dept_id, hire_date, salary  
FROM EMPLNEW1  
WHERE dept_id =:enter_dept_id and hire_date>'01-May-1998'
```

38.Using a substitution variable for job_id, display the last_name, the dept_id, and the job_id for employees having job_id=IT_PROG or ADMIN.

```
SELECT last_name, dept_id, job_id  
FROM EMPLNEW1  
WHERE job_id =:enter_job_id
```

39.Display the average of the salary and round the result to 2 decimal places for employees having job_id= IT_PROG or ADMIN.

```
SELECT round(avg(salary),2)  
FROM EMPLNEW1  
WHERE job_id =:enter_job_id
```

40.Using a group function, display the last name in alphabetical order.

```
SELECT last_name  
FROM EMPLNEW1  
order by last_name
```
